## **CLAIMS**

What is claimed and desired to be secured by Letters Patent is as follows:

- 1. A method of compiling data comprising: inviting telephone responses to a data-gathering campaign; inviting Internet responses to a data-gathering campaign; automatically routing the telephone responses and the Internet responses to a single data bank which is common to both a telephone response path and an Internet response path; preventing duplicate telephone responses from reaching the single data bank; preventing duplicate Internet responses from reaching the single data bank; and using data captured in the single data bank to analyze a campaign.
- 2. The method defined in Claim 1 further including a step of further processing non-duplicate responses.
- 3. The method defined in Claim 2 wherein the step of further analyzing responses includes a step of selecting a response for special attention.
- 4. The method defined in Claim 2 further including a step of merging telephone responses and Internet responses received in the data bank into a single merged data report.
- 5. The method defined in Claim 3 wherein the step of further analyzing responses includes a

step of identifying a respondent associated with the selected response.

- 6. The method defined in Claim 5 wherein the step of further analyzing responses includes a step of notifying the identified respondent.
- 7. The method defined in Claim 6 wherein the step of further analyzing responses includes a step of notifying a non-selected respondent that their response has not been selected for special attention.
- 8. The method defined in Claim 7 wherein the telephone response is via a toll-free number.
- The method defined in Claim 1 wherein the step of using the single data base to analyze a campaign includes steps of analyzing respondent profiles and information including name and address.
- The method defined in Claim 6 wherein the step of further analyzing responses includes a step of notifying the respondent via the channel used by the respondent to accept the invitation.
- The method defined in Claim 9 wherein the step of using the single data bank includes capturing cookie information.

- 12. The method defined in Claim 1 further including a step of identifying the number of Internet responses.
- 13. The method defined in Claim 1 wherein the step of preventing duplicate responses includes notifying a respondent associated with a duplicate entry of the prevention step being taken.
- The method defined in Claim 1 wherein the step of further analyzing responses includes a step of capturing HTML and sending HTML to a browser.
- The method defined in Claim 13 further including a step of notifying a respondent associated with a duplicate response when a response from that respondent will be accepted.
- The method defined in Claim 2 wherein the step of further analyzing responses includes a step of obtaining ANI for each response received via a telephone channel.
- The method defined in Claim 7 wherein the step of further analyzing responses includes a step of notifying a non-selected respondent when another response will be accepted from that non-selected respondent.
- 18. The method defined in Claim 1 wherein the step of routing telephone responses includes

interactive voice response steps.

- 19. The method defined in Claim 1 wherein the step of routing telephone responses includes automatic number identification steps.
- The method defined in Claim 17 wherein the step of routing Internet responses includes automatic number identification steps.
- The method defined in Claim 1 further including a step of entering a UPC associated with a response into the data base.
- The method defined in Claim 1 further including entering a UPC associated with a response into a single data base.
- The method defined in Claim 21 further including a step of checking the validity of each UPC entered into the single data bank as it is entered and notifying a respondent if the UPC is not valid.
